

The pH Balancing System

The **pH Balancing System** includes everything you need to rebalance your body's pH, including information, supplements, pH test strips, and a one-liter water bottle. While it may seem like quite an investment, consider this: how long have you mistreated your body... 20 years? 30 years? Maybe more? How about this... how much have you spent on things that have contributed to the over-acidification of your body (money on alcohol, coffee, acidifying foods, etc.)? For the price of two dinners at a nice restaurant with your significant other, you can get the education and supplementation that you need to regain the healthy, vibrant body that you deserve. Take self-responsibility and invest in the only body you'll ever have.

The Complete pH Balancing system includes:

- Alkalive™ pH Booster
- Alkalive™ Cleanze
- Alkalive™ d-tox
- Alkalive™ Green Powder - or - Capsules
- Alkalive™ Blue
- Alkalive™ Indigo
- Alkalive™ Violet
- Alkalive™ Red
- Alkalive™ Orange
- Alkalive™ Gold
- Silvagen™
- Alkalive™ pH Stix - 80 pH test strips

Plus, HealthStyles4U will include the following gifts for **FREE**:

- The Acid-Alkaline Diet for Optimal Health Book
- 32 oz. Polycarbonate Water Bottle
- Guide and Instructions on pH Balancing

The Complete pH Balancing System

Retail Price: \$224.95

The pH Miracle Pak

This system includes everything you need to rebalance your body's pH, including information, most of our supplements, pH test strips, and a one-liter water bottle. While it is not quite as extensive as The Complete System, it's a bit more affordable. Invest in regaining the healthy, vibrant body that you once had.

The pH Miracle Pack includes:

- Alkalive™ pH Booster
- Alkalive™ Cleanze
- Alkalive™ d-tox
- Alkalive™ Green Powder - or - Capsules
- Alkalive™ Blue
- Alkalive™ Indigo
- Alkalive™ Violet
- Alkalive™ Orange
- Alkalive™ pH Stix - 80 pH test strips

Plus, HealthStyles4U will include the following gifts for **FREE**:

- The pH Miracle Book
- 32 oz. Polycarbonate Water Bottle
- Guide and Instructions on pH Balancing

The pH Miracle Pak

Retail Price: \$199.95

The Alkalizer Pak

This pack includes seven of our core alkalizing supplements without the cleansing and detoxifying products. This is a good option if you are not severely acidic, but want to replenish and rebalance your body. It's a good pack to use when doing a 2-3 day cleanse a few times per year.

The Alkalizer Pak includes:

- Alkalive™ pH Booster
- Alkalive™ Green Powder - or - Capsules
- Alkalive™ Blue
- Alkalive™ Indigo
- Alkalive™ Violet
- Alkalive™ Orange
- Alkalive™ Gold
- Alkalive™ pH Stix - 80 pH test strips

Plus, HealthStyles4U will include a 32 oz. Polycarbonate Water Bottle for **FREE**.

The Alkalizer Pak

Retail Price: \$159.95

Balance Your pH

Find Out By Testing

To maintain good health the body is constantly seeking to get rid of the excess acids that irritate the tissues and deplete them of minerals. One of the principal systems it uses for this purpose is the renal system (kidneys). The normal rate of acid excretion through the kidneys gives urine a pH that falls between 6.75 and 7.25. By testing the degree of acidity of the urine, you can determine whether your body is eliminating a normal quantity of acids. If the acid excretion rate is higher than normal, the urinary pH will be more acidic. This low urinary pH is also an indication that the body is saturated and therefore in an acid state.

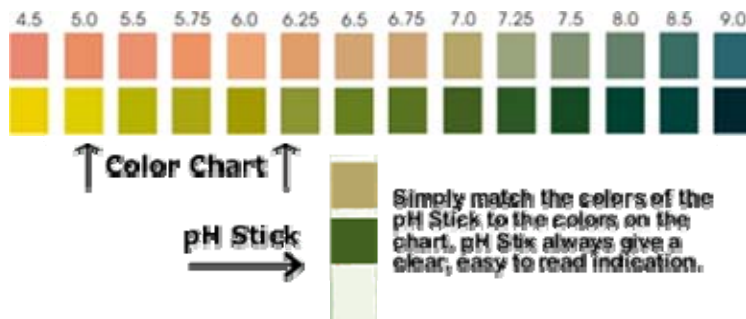

Another indicator of the overall pH balance in your body is the pH of your saliva. When your body has the mineral reserves that it should, the abundance of minerals will show up in a saliva pH test as a pH reading of 7.0 to 7.50. A low saliva pH reading indicates that the mineral reserves in your body are low, and are being used to buffer acids elsewhere in the body.

There is a strong correlation between the pH of the body's internal environment and that of the urine and saliva: urine and saliva become acidic when the body's internal environment becomes acidic. You can discover the pH of these fluids by using Alkalive™ pH Stix™. These pH test strips are made specifically to test saliva and urine, and are the most accurate and economical test strips on the market.

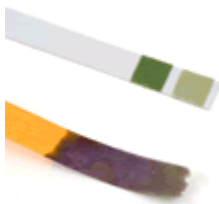

Do not trust your body to just any chemical lab litmus pH paper.

Alkalive™ pH Stix™ are unlike most pH test strips or pH papers on the market. Due to the narrow range in pH of these bodily fluids (generally 5.8 to 7.6) it is imperative that a pH test strip give a clear indication in small pH unit increments. These strips do just that. Our test strips give an indication in .25 pH unit increments, and test within a range of 4.5 to 9.0. Plus, pH Stix use the double color indicator method, allowing for a more accurate determination of the pH value of what you are testing. Throw away the pH paper, and use our pH Stix.

Ordering information is included below.

pH Stix™ come complete with directions, indicator color chart, and a guide on how to interpret results.

Compare pH Stix™ with standard pH paper from rolls. pH Paper tends to “bleed” when it gets wet, making the determination of the correct color quite a challenge. pH Stix are different because the reagent is affixed to a plastic strip. No paper, no bleeding, no mess; easy testing. Alkalive™ pH Stix™ for saliva and urine.

pH Stix™ come packaged in a pack containing 80 pH test strips. This is what Dr. Ted Baroody, author of *“Alkalize or Die”*, has to say about pH Stix™: *“I get hundreds of calls for pH testing materials. pH testing is very complex. There are individual pH testing substances for everything, but they are very expensive. This particular strip is reasonably priced. I have looked a long time and through many companies to find these quality pH strips. My experience with litmus pH paper strips has not been good, and I do not recommend them.”* pH Stix are the preferred method for testing pH levels.

SALIVA: Take a saliva reading before and after meals. The alkaline levels of your saliva should be greater after meals because there is an abundance of alkaline-rich minerals in saliva. Then test your saliva 60 minutes later. If the pH level is lower than 6.75, then your alkaline mineral reserves are low.

URINE: For best test results, test your *second* urination in the morning. You will likely see urine pH become more alkaline as the day progresses. Test frequently during the day, and determine an average.

Alkalive™ pH Stix™ are included in all of our Supplement Packages.
