

UltraNatural Prostate with 5-Loxin® and Standardized Lignans

Prostate Health Supplements For Men Only

DOSAGE: 2 softgels daily divided between morning and evening, with or without food, or as recommended by a healthcare practitioner.

Maintain Healthy Prostate Function With Prostate Health Supplements

A huge percentage of men over age 50 suffer from prostate-induced discomforts.

The Ultra Natural Prostate Formula contains the most scientifically substantiated nutrients to help protect the prostate gland and maintain [prostate health](#).

Recently added to the formulas are standardized lignans from flax and the Norway spruce trees. These lignans convert to enterolactones in the intestine that are then absorbed into the bloodstream where they provide significant biological effects. Enterolactones have demonstrated anti-estrogen and anti-DHT effects that are of particular importance for the aging prostate gland.

Prostate Health and 5-LOXIN

The eight other active ingredients in Ultra Natural Prostate Formula are:

- **5-LOXIN® boswellia extract.** Published studies show that normal aging and poor diet cause levels of a dangerous enzyme (5-lipoxygenase) to increase, which can affect prostate cells. 5-LOXIN is a patented extract from the boswellia plant that has been shown to suppress 5-lipoxygenase and other pro-inflammatory factors.³³¹⁻³³⁵
- **Nettle root extract (*Urtica dioica*).** In aging men, too much testosterone is converted to estrogen. Prostate cells are sensitive to estrogen's growth stimulatory effects. Nettle root helps protect prostate cells against the excess estrogen levels.³³⁸
- **Saw palmetto extract.** A number of normal biological events in aging men affect prostate function and structure. Saw palmetto has been shown to interfere with DHT activity in the prostate, inhibit the alpha-adrenergic receptor inhibitor (to support normal urinary flow) and help control inflammatory actions in the prostate gland
- **Pygeum.** Normal aging results in levels of certain prostaglandins increasing in the prostate gland. Pygeum africanum extract helps suppress these prostaglandins, keeping the prostate gland placid and promoting [prostate health](#).

- **Beta-sitosterol.** The most biologically active constituent of pygeum is beta-sitosterol. It is more cost effective to obtain beta-sitosterol from other plant sources for inclusion in a prostate health formula.
- **Cernitin®.** This European pollen extract has been shown to relax smooth muscle tone of the urethra, counteract DHT, and help regulate inflammatory reactions.
- **Boron.** This mineral helps protect bones, and has been shown to slow elevation of PSA, most probably by protecting against protein-degrading enzymes in the prostate gland.
- **Lycopene.** This carotenoid most commonly associated with tomato sauce helps maintain healthy DNA gene function in prostate cells.

Prostate Function and Your Health

Ultra Natural Prostate Formula provides pharmaceutical-grade standardized plant extracts that have been shown to promote healthy prostate function. No other prostate protection formula provides such a broad array of nutrients to counteract the multiple factors involved in maintaining a healthy prostate gland.

The daily dose of two softgels of the new Ultra Natural Prostate Formula provides:

Saw palmetto (supercritical extract)	320 mg
Nettle root extract (<i>Urtica dioica</i>)	240 mg
Pygeum extract (11.7% pygeum sterols)	100 mg
5-LOXIN®	70 mg
Lycopene extract	10 mg
Phytosterol Complex (standardized to 26.6% beta-sitosterol)	678 mg
Boron (from citrate, glycinate, and aspartate)	3 mg
Cernitin®	252 mg
HMRlignan™ Norway Spruce lignan extract	13.9 mg
ActiFlax™ Flax lignan extract	6.25 mg
